ABOUT THE COURSE

The FRONT-END WEB DESIGNER course is designed to equip learners with the essential skills required to create modern, visually appealing, and user-friendly websites. This programmer combines both creative design and technical development, enabling participants to build responsive and interactive web applications from the ground up.

Learners will gain a strong foundation in design thinking, allowing them to approach problems creatively and develop solutions that enhance user experience. The course also focuses on visual design principles, ensuring that websites are not only functional but aesthetically engaging.

In addition, participants will explore responsive web development techniques to ensure websites perform seamlessly across different devices, including desktops, tablets, and mobile phones. UI/UX design is a core component, helping learners understand user behavior and design intuitive interfaces.

By the end of the course, learners will also be introduced to web animation and automation, enabling them to create dynamic and interactive digital experiences. This course prepares individuals for entry-level roles in web design and development or for further studies in the ICT field.

Target Audience
